DETAILED ACTION

1. Formal Matters

- A. The Amendment dated 5/4/04 has been entered into the record.
- B. Claim 1 is pending and is the subject of this Office Action.
- C. The Information Disclosure Statement dated 5/4/04 has been entered into the record. All references have been considered.
- D. All Statutes under 35 USC not found in this Office Action can be found, cited in full, in a previous Office Action.

2. Specification

- A. The objection to the specification has been withdrawn in view of Applicants' amendment to the title.

3. Obviousness-Type Double Patenting

- A. All issues regarding obviousness-type double patenting have been withdrawn since the claims recite a functional limitation not found in any of these U.S. patents or copending applications. Specifically, that the variant has increased affinity, relative to the native hIL-3 receptor, for the high-affinity IL-3 receptor.

4. Claim Rejections - 35 USC § 112, first paragraph - enablement

- A. The rejection of claim 1 under 35 USC 112, first paragraph, has been withdrawn in view of Applicants' amendment to the claim to limit the breadth of the IL-3 variants by including a functional limitation.

Art Unit: 1647

5. Claim Rejections - 35 USC § 112, first paragraph – new matter

A. Claim 1 has been amended to recite “replacement...by other amino acids.” However, this broadens the scope of claim 1 since the substitutions now includes all other 19 naturally occurring amino acids as well as non-naturally occurring amino acids.

6. Claim Rejections - 35 USC § 112, first paragraph – written description

A. Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

These are genus claims. The claim recites “native hIL-3.” No sequence identifier is recited in the claim. It is not known how many different IL-3 molecules are encompassed by the claim. IL-3 molecules, such as splice variants, would have one or more amino acid substitutions, deletions, insertions and/or additions to the IL-3 molecule disclosed in the specification.

The scope of the claims includes numerous structural variants, and the genus is highly variant because a significant number of structural differences between genus members is permitted. The specification and claims do not provide any guidance as to what changes should be made. Structural features that could distinguish compounds in the genus from others in the protein class are missing from the disclosure. No common structural attributes identify the members of the genus. The general knowledge and level of skill in the art do not supplement the omitted description because specific, not general, guidance is what is needed. Since the disclosure fails to describe the common attributes or characteristics that identify members of the genus, and because the genus is highly variant, “native hIL-3” alone is insufficient to describe the genus. One of skill in the art would reasonable conclude that the disclosure fails to provide a representative number of species to describe the genus. Thus, Applicant was not in possession of the claimed genus at the time the invention was made.

5. Conclusion

A. No claim is allowable.

Art Unit: 1647
